## Read Your Favorite Novel with an e-Reader

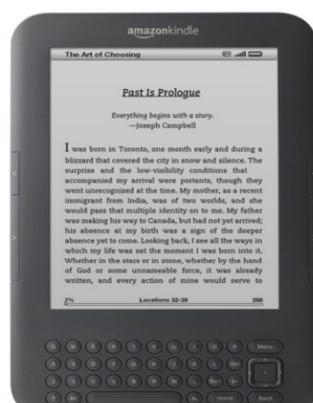

e-Readers are becoming easier to use and now have features that may make them the perfect device for some people who are visually impaired. The two most popular are the Kindle by Amazon and the Barnes Noble Nook. Both have adjustable font types and sizes and the newer screens have enhanced contrast.

The Kindle comes with either a 6" or 9.7" screen size. The screen is not backlit, which may help reduce glare. It is operated with a 5-way toggle switch. In a recent study comparing several e-readers, the Kindle had the largest maximum font size.

**Barnes Noble Nook**

**Amazon Kindle**

The Nook has a 6" backlit screen and operates with a touch screen. Both the Kindle and Nook are stand-alone devices and do not require the use of a computer. However, both the Kindle or Nook have applications that can be downloaded to a PC, Mac Computer, iPad as well as to your Android, Windows or Blackberry cell phone.

New experimental features include Text-to-Speech, which allow some materials to be read aloud, and Voice Guide which uses speech to help with navigation of the device.

While the e-Readers may not have enough magnification to work as a low vision device for all visually impaired persons, they may be the perfect device for those whose vision is in the mild to moderate range. You can test out the Kindle at Staples Office Supply. The Nook is available at all Barnes Noble locations.

## Light Your Way With Our New Panther Lights

Everyone has an occasional need for hands free light. Panther clip-on lighting provides ultra-bright task lighting for reading and for many other near tasks. Clip the light to your eyeglasses, hat, or screwdriver and put the light where it is needed. Both ViewFinder locations now have these inexpensive lighting solutions in stock.
